Network Control Group

# MANAGEMENT ANALYTICS & CONTROL

**Network Control Group**

# Make better decisions, faster using accurate, real-time data

- Increase building efficiency and save energy costs

- Maximise Return on real estate investment

- Optimise space utilisation

- Enhance wellbeing

**57%**

**of real estate stakeholders worldwide**
believe automation, Big data and data analysis
will have the biggest impact on the industry.

# Building and User Analytics

Adopting a data-driven approach to the way you manage space, costs and experience will enable you to make better, faster decisions.
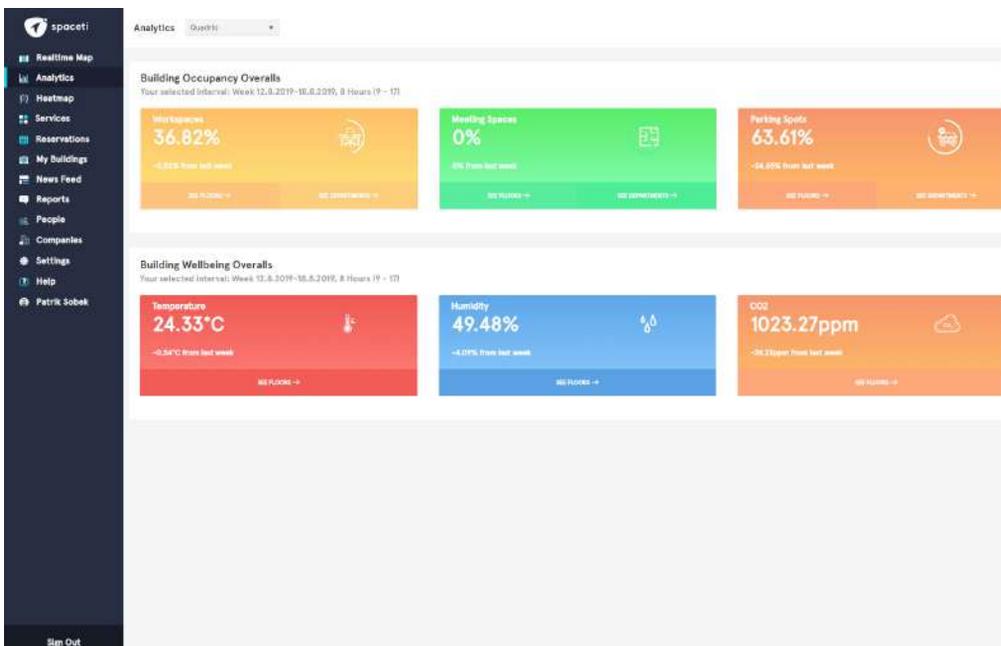

Building level analytics covering efficiency and wellbeing can help you save energy costs whilst still providing a healthy and productive workplace. Wellbeing analytics combined with real-time visuals on environmental factors can help you identify and address any potential issues quicker.

User level analytics covering occupancy, presence and movement can help you optimise space utilisation levels and spot trends as to the most engaging type of space or location. Having a clear understanding of trends over time can also help you cut operational costs.

NCG can help you unlock comprehensive insights and take control of your workspace costs and experience.

**Make data-driven decisions**
that reduce costs
whilst
enhancing user experience

✓ Save energy costs

✓ Reduce operational costs

✓ Optimise space utilisation

✓ Enhance wellbeing

✓ Address issues faster

✓ Cut complaint overhead

# Network Analytics and As Consumed SLA

Most people nowadays own at least three mobile devices – smartphone, tablet, wireless headphones, and smart watch – and bring at least two of them to work. All offices provide computer and audio-visual equipment, and wireless printing is a must-have. Ensuring security within the building and individual offices requires even more devices to be added.
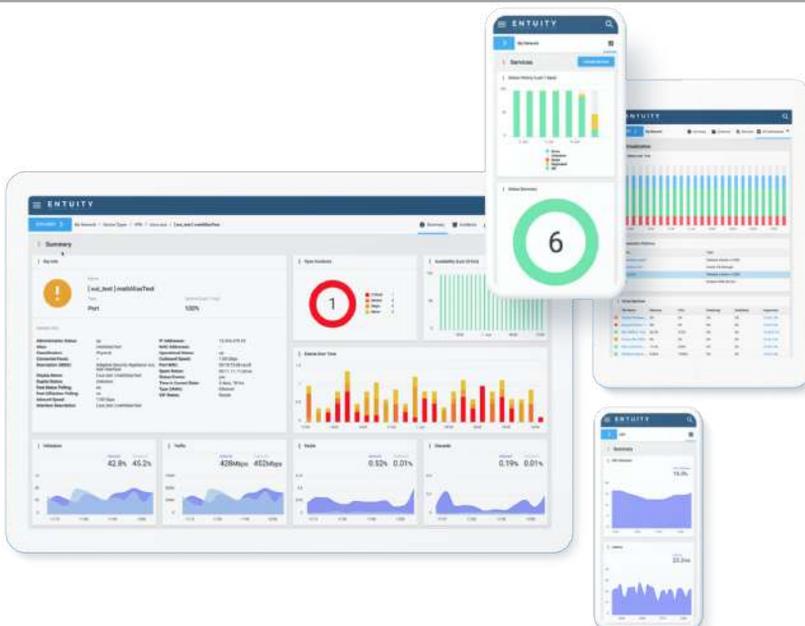

The rising number of devices and increased traffic puts significant pressure on the network and can lead to connectivity issues.

To make things worse, today's traditional connectivity SLAs are not fit for multi-tiered environments as they focus on the service provided, not as consumed. Connectivity to the building may be active but Wi-Fi might be down and you won't get the support needed to identify and resolve the issue in a timely manner.

NCG can help you gain key network insights, actively monitor and mange connectivity and Wi-Fi services and provide a combined service SLA, keeping everyone online.

**Real-time insights**

on

network traffic and load

✓ Optimised, consistent Wi-Fi experience

✓ Combined SLAs across multi-tenant environments

NETWORK ANALYTICS

Network Control Group

# SMART, NETWORKED OFFICES.
# MADE SIMPLE.

We are PropTech System Integrators on a mission to simplify the delivery of smart, networked offices.

We connect the dots between buildings, businesses and people, using IoT devices, a modular smart workplace platform with a mobile-first user experience, connectivity services and analytics.

Our solutions will work with your existing systems, giving you more experiential control and access to powerful insights. This will help you optimise real estate costs, implement a new workplace culture, and boost wellbeing and productivity.
