OFFICE DIGITISATION

Network Control Group

Network Control Group

Deliver a modern-day workplace people love.

- Implement flexible working policies with ease

- Provide a mobile first experience

- Improve wellbeing

- Optimise costs

89%

of British workers believe flexible working would boost their workday productivity levels.

Flexible Working

Technology has changed the way people work, putting great pressure on landlords and workspace operators to replace traditional offices with flexible workspaces.

Likewise, individual businesses are confronted with the need to implement flexible working policies successfully in order to attract and retain talent.

Responding quickly to the new flexible working culture can be difficult and costly without the right solutions in place to optimise space, control the environment, enable easy self-service on hot desk and meeting room bookings and get a good understanding of occupancy, space utilisation, presence and movement.

NCG can help you create engaging flexible workplaces that people not only have to, but want to work in.

One

multi-tiered app to manage your entire portfolio of properties/ offices and user experience

✓ Real-time space availability

✓ One-tap bookings

✓ Powerful insights

✓ Extensive integrations

✓ Whitelabel mobile app

Wellbeing

People operate more effectively and perform better in a healthy, inspiring working environment.

Unhealthy indoor conditions result in reduced productivity, more sick days and can impact the bottom line in the long term.
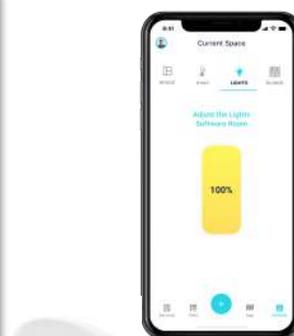

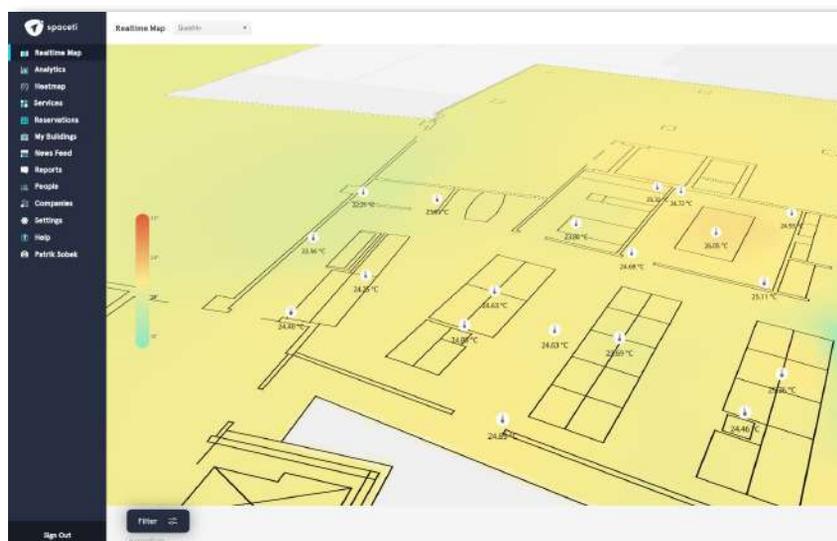

Even if you do your best to look after everyone, it may still be too hot or too cold for some in the office, meeting rooms or shared spaces.

NCG can help you take control over key environmental elements to deliver a healthy, comfortable workplace that ensures long-term employee productivity, boosts satisfaction and increases retention rates.

You will be able to monitor and adjust the environment, based on real-time occupancy rates and space utilisation insights, in order to reduce energy costs. You can also enable people to control temperature in meeting rooms or designated areas using the mobile app.

Take control of
key environmental factors
to deliver
a healthy, comfortable
environment for everyone

✓ Adjust lights, heating, ventilation

✓ Customise and schedule reports

✓ Simplify facility management

✓ Spot and address issues faster

Mobility First

A mobile-first experience is the new norm in the digital era, both outside and inside the workplace. People expect a truly connected experience that saves time and helps boost productivity.

Giving people an easy way to access the building and navigate to a desired space will save them time and ensure they can get on with work straight away.

Enabling them to view real-time hot desk or meeting room availability and make bookings, either in advance or on the spot, based on individualised requirements, will help boost satisfaction.

NCG can help you deliver a truly connected experience that empowers and engages people throughout the office, shared spaces and overall building facilities. Moreover, you'll have an easy way to communicate with them, gather feedback and further improve experience based on real-time insights.

All

the information,

tools and services

people need

in a single app

✓ Mobile-based , secure access

✓ Environmental control

✓ Real-time availability

✓ Hot desk/ meeting room booking

✓ Indoor Navigation

Occupancy Analytics

Occupancy analytics are key to understanding and optimising space utilisation, costs and overall tenant or employee experience within a modern workplace.
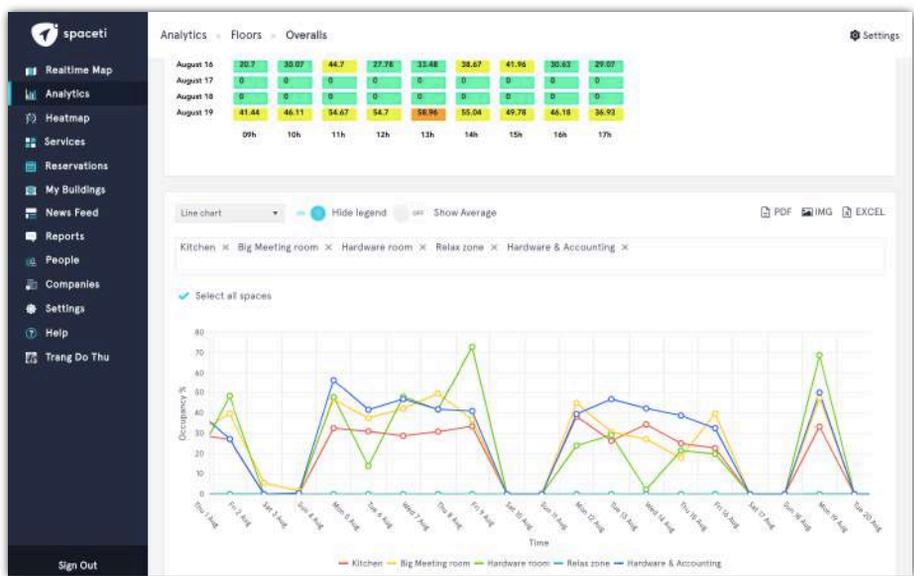

Insights into how building spaces are being used are essential for optimising the required space, whilst real-time detection of presence, location and number of people in a given area enables successful allocation of office hot desks or meeting rooms.

Anonymous identification of inter- and intra-team interactions can help measure engagement levels across the building space. Combined with formal and informal collaboration patterns and trends monitoring, this can inform space optimisation decisions and boost employee productivity.

NCG can give you access to key user insights to understand and optimise space utilisation, real estate costs and the overall tenant/employee experience.

Make

data-driven decisions

that help drive

business-wide improvements

✓ Long- and short-term occupancy analytics

✓ Real-time analytics and hot-desking
