

A New Breed of Service Provider Connecting the Dots Between Buildings, Businesses & People

Indoor Air Quality

Monitor and track environmental metrics such as temperature, humidity, CO2, TVOCs and PM in real-time to ensure optimum working conditions and promote the health of building users.

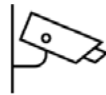

Smart Building Management

Gather real-time data on space utilisation - across offices, classrooms or facilities - in order to make data-backed business decisions. Repurpose underutilised assets, understand hotspots and ensure maximum densities are never breached.

Facilities Management

Smart IoT driven facilities management tools to streamline processes, lower operational costs and decrease your carbon footprint.

Smart CCTV

Enhanced security and gather business analytics data with AI cameras equipped with machine learning, panoramic views and thermal / night vision.

Business Connectivity

Fast, resilient connectivity with centralised monitoring tools to ensure a truly consistent experience in every corner of your asset.

Contact Tracing

Wearable IoT contact tracing devices to promote health and safety, mitigate infection risk and avoid the pitfalls associated with mobile phone based systems.
